FEMA

- Two deployments during the FY06 season:
  - Hurricane Ernesto
  - Buffalo Snow Emergency
- Both used the concept of operations promoted by the proposed frago that would have LRP issue all taskers and funding for the pre-dec operations.
- Successes:
  - The 249th upgraded communication equipment (Begans/ Cheetah).
  - Using LRP's contracting capability to deploy the PRT, the 249th and the contractor.
  - Better synergy among all team members than before

FEMA

- Things to work on:
  - Coordinated deployment of all FEMA and USACE resources. (Establishment of a National PSMA?)
  - Resolve the discussion of acquisition of Rights of Entry (ROE) and Environmental Baseline Assessments and begin to obtain them routinely. (ROEs acquired during pre-certification?)
  - Institute BAH deploying with PRT to trouble shoot Englink Power module as SOP.
  - Turning over generators to the Corps as soon as they arrive on-site.
  - Align both FEMA and USACE to one data base to track movement and placement of generators.
